This assignment is very open-ended. Courtesy of Connor Ludwigson, I am providing a working implementation of Mastermind (remember Program 2?). Your job, is to convert it to a Python class. Exactly how you do that is up to you. One suggestion: the code works as is – try not to break it.

(As you have probably determined, the photo has nothing to do with the assignment. I thought the handout needed a little color and this photo reminds me of a particularly good day in the mountains.)
